

Group Exercise: Licenses

Group members:

Section (circle one)	12:30pm	2:00pm
-------------------------	---------	--------

(1) Choose a license to analyze:

MIT License	Apache 2.0 License
GNU General Public License (GPL)	Creative Commons Attribution (CC BY)
Creative Commons Attribution-ShareAlike (CC-BY-SA)	Creative Commons Attribution-NonCommercial (CC BY-NC / BY-NC-SA)
CC0 / Public Domain Dedication	BSD License

(2) In your own words, what permissions are granted by this license?
What conditions must users follow to use these permissions?

(3) Does this license allow for commercial use of a work (e.g. in a product, service, or for-profit project) without permission from the creator?

(4) Are adaptations or "derivative works" allowed under this license? If so, what rules apply to distributing these derivative works?

- (5) Recall the dataset you assembled for the "digital account biopsy" exercise. Would you feel comfortable releasing that dataset under the license? What concerns or reassurances would you have?
- (6) Consider the story you wrote for your "speculative fiction" exercise. Would you publish this story under the license? What would the license protect (or not protect) about your work?
- (7) Suppose you help develop a software library for a class, and you want to showcase it in your resume and online portfolio. Would this license serve your goals for such a project?
- (8) Find a real-world project, dataset, or creative work that uses this license. Briefly describe it, and explain why you think the creators chose this particular license for the work.
